Whom It May Concern

**RE: GNC Concrete and Precast**

McConnell Dowell Constructors (Aust) Pty Ltd were contracted to complete the ASKAP Project, located in Murchison WA for Commonwealth Science and Industrial Research Organisation (CSIRO)

The project involved the construction of 30 reinforced concrete pad foundations for telescopic antennas, a central compound containing a control building and associated services infrastructure, a network of access tracks, trenching to carry power and optical fibre data cable and a 9km main access road, in areas that have previously been used for pastoral purposes.

GNC Concrete and Precast were engaged by McConnell Dowell to provide the following services:

- Supply and cartage of all insitu concrete aggregate products & cement
- Fixing of reinforcement, formwork and preparation of in situ concrete antenna bases
- Production, placement and finishing of blinding and structural concrete using mobile batch plants

GNC Concrete and Precast were subcontracted on the project between May and October of 2011 and successfully completed the works to a good standard. The Mobile batch plants offered an excellent solution for concrete works in such a remote area. They produced a quality and consistent product that met the specified requirements of the contract.

Yours Sincerely,

David Gee  
Project Manager  
McConnell Dowell Constructors (Aust) Pty Ltd
